## AF85400 BOOGIEMAN™ ALUMINUM HEADS

**SKU:** AF85400

The world famous "BoogieMan" cylinder heads are in stock and ready to ship. This is the next step in the "Boogie-Man" line. Using an American made casting, CNC machining, and a top-of-the-line seat and guide machine, we have the absolute best cylinder head for a high performance 472 or 500 Cadillac, on the market today. They have 70cc combustion chamber chambers (adds about 1/2 a point of CR over 76cc iron heads), and include 2.25" / 1.8" valves (the same high-grade stainless steel and production methods used for our iron head valves). These heads have been used on numerous applications from daily drivers to full race applications, and they weigh in at 32 Lbs. (vs. the stock iron head's average weight of 62 Lbs.) per head.

## AF85400 BOOGIEMAN™ ALUMINUM HEADS

**SKU:** AF85400

The world famous "BoogieMan" cylinder heads are in stock and ready to ship. This is the next step in the "Boogie-Man" line. Using an American made casting, CNC machining, and a top-of-the-line seat and guide machine, we have the absolute best cylinder head for a high performance 472 or 500 Cadillac, on the market today. They have 70cc combustion chamber chambers (adds about 1/2 a point of CR over 76cc iron heads), and include 2.25" / 1.8" valves (the same high-grade stainless steel and production methods used for our iron head valves). These heads have been used on numerous applications from daily drivers to full race applications, and they weigh in at 32 Lbs. (vs. the stock iron head's average weight of 62 Lbs.) per head.

# HARDWARE

Stock heads will have 3 plugs per head. Read More >>

2 per head will be the disc type (the hole will have a step so the plug can only go in so far). The third head plug will be one of the following:

- Disc style plug like the other 2 (mostly '68-'69 engines).
- The press in cup style (like a standard freeze plug) (some '68-'69 engines and 425 / 368 heads).

The 425 and most 368 heads will have one plug and one press in 90° heater outlet (no longer available) from the factory.

- Threaded head plugs (pipe thread) - usually one plug and one straight heater outlet (most '70-'76 engines)

# RINGS AND BEARINGS

Here at Cad Company, we have torture tested a variety of different rings and bearings under a wide range of conditions. In some cases, a specific product *is* recommended over others - but not always what you'd expect.

**Our Policy** - We only sell rings and bearings that we use in our turn-key engines, and are willing to stand behind with one of the best warranties in the crate engine business.

**Brands** - In our experience, there is not any real benefit of one brand over another in most cases (and many of them are the same parts in a different box, anyway) - we simply don't offer the ones you don't want. Some sizes are only available in 1 or 2 brands. If you want a specific brand, we would be happy to accommodate you (if they are available in the size you need), but be aware that specifying a brand may result in a higher price, as we don't have the benefit of negotiating the best price for a volume order.

**Cam Bearings** - Cam bearings are not all created equal. Durabond bearings are the best choice for most builds, but there are situations where something different is called for. The Cad Company exclusive grooved cam bearings (pictured) are made to our specs by Durabond. They incorporate a groove around the outside to allow oil to flow around the the second hole, which allows oil to enter the bearing on the loaded side, decreasing the chance of bearing failure due to high spring pressure. They also have an oil clearance closer to the middle of the factory spec, instead of tighter like the other off-the-shelf bearings, eliminating the need to clearance the bearings during assembly. If you have a problem with the cam bearings 'smearing', these bearings are probably the solution.

**Rod and Main Bearings** - There are 2 'series' of bearings available for rod bearings - 'P' and 'H'. 'H' bearings are generally intended for race cars. They are a harder alloy, and will survive more abuse in the way of things like being hammered on by detonation, but they tend to result in increased crankshaft wear due to reduced embeddability. 'Embeddability' is the property of bearings where contaminants embed into the bearing material, and reduced embeddability means that those contaminants stay on the surface, where they can scratch the

crankshaft. We do not recommend 'H' series bearings for anything but the most extreme drag racing applications.

**Coatings** - There is a lot of contradictory information out there about the various bearing coatings available. We have not been able to verify any of these claims on dyno test engines. At this time, we do not offer coated bearings.

**Rings** - We prefer moly rings for most N/A applications. They seat quick, last quite well, and are (relatively) reasonably priced. Care should be taken when selecting rings - check the piston description for special ring requirements before ordering. Also, be sure to check the instructions for ring end gap that come with your pistons - those usually take precedence over recommendations found elsewhere. When in doubt, ask.

Standard Replacement Billet Steel Crank Hub

This hub is a direct replacement for the stock crank hub, in tougher billet steel form. Suitable for any application for which the factory hub will fit, but you need a replacement (due to a lost or damaged factory hub), or something tougher. This hub fits all 472 / 500 / 425 / 368 engines, and maintains the correct press-fit.

# CRANKSHAFTS, STROKER KITS, CRANK HUBS, AND VIBRATION DAMPENERS

Crankshafts, Stroker Kits, Crank Hubs, and  
Vibration Dampeners [Read More >>](#)

Cad Company does not sell stroked stock cranks by themselves - we only sell them as complete rotating assemblies. We do sell reconditioned and machined stock cranks, ready to install and aftermarket billet cranks (the same ones in our billet crank stroker kits, as well as made-to order).

Cad Company's stroker kits utilizing stroked stock cranks incorporate all that we have learned over 40+ years of building performance Cadillac engines, and our current recipe has been torture tested to nearly 2k HP. Most home-brew stroker cranks fail sooner or later (usually sooner) on engines making any real power - it's not as simple to build a reliable stroker crank as some would have you believe, but we have worked out the details to offer you a reasonably priced rotating assembly, without having to go through the trial and error method of figuring out what fails and what doesn't.

We offer 2 crank hub options. In most cases you will want the 'standard' hub. The offset hub was primarily for pulley alignment with an obsolete (no longer available) aftermarket dampener. Most '73-older (3-groove) factory pulleys are back-cut to provide clearance for the factory vibration dampener. Some '73-older and most '74-newer (2-groove) factory pulleys, as well as all aftermarket pulleys, are not. All factory hubs have the same spacing, and that's what the 'standard' dampener matches. If you want to use the factory dampener with a late or aftermarket pulley, the offset hub is your best bet, but it will generally require manually shimming the pulley for proper belt alignment (with a stock or standard replacement hub, you would have to machine the clearance into the back of the pulley, IF the pulley you are using has room to do so). You cannot simply use the offset hub and pull the hub outward for belt alignment, as the hub must be pressed on as far as it will go - there are a variety of likely failures if the hub is not pressed on all the way, it's just a matter of what fails first.

The only vibration dampener currently available is sold as a complete unit, with it's own unique hub (pre-assembled together). The

mounting face provides the same pulley alignment as the factory and 'standard' replacement hubs.

All non-Eldo 68-up Cadillacs came with either a front sump or mid-sump oil pan.

A true rear sump pan is generally required for most non-Ford swaps, including all of our bolt-in kits.

GMC motorhomes and Eldorados require an original Eldo oil pan - aftermarket pans will not fit.

'65-'67 Cadillacs require a front sump oil pan, as found on '68-'76 non-Eldo Cadillacs.

# VALVETRAIN

The valvetrain is an important part of any engine combination. Whether your engine is stock or full race, or anything in between, having a correctly matched, properly functioning valve train is of equal importance. If you are not sure which components are right for your engine, feel free to send us an e-mail or give us a call for a recommendation. Below you will find a variety of valves, springs, seals, and other timing components to put together a first class valvetrain.

## VT20350 SS 350 H CAMSHAFTS AND KITS - HIGH COMPRESSION (10:1 OR MORE) HOT-ROD STREET PERFORMANCE

**SKU:** VT20350

350 H series camshaft

This cam will generally put the meat of the powerband in the 2600-5800 RPM range. That means that for an exclusively drag-race-only application, you might want the converter to stall as high as 2600 RPM, and you would want to shift around 5800 RPM, if everything else is optimized for that RPM range. This cam runs great right off idle, as all real street cams should, and for applications involving street use, we recommend a more street-friendly stall speed for the converter.

Good ignition and exhaust recommended. Expect a hot-rod Idle. This cam is a good choice for truly streetable performance, as well as certain classes of gearbox-driven airboats.

## VT20350 SS 350 H CAMSHAFTS AND KITS - HIGH COMPRESSION (10:1 OR MORE) HOT-ROD STREET PERFORMANCE

**SKU:** VT20350

350 H series camshaft

This cam will generally put the meat of the powerband in the 2600-5800 RPM range. That means that for an exclusively drag-race-only application, you might want the converter to stall as high as 2600 RPM, and you would want to shift around 5800 RPM, if everything else is optimized for that RPM range. This cam runs great right off idle, as all real street cams should, and for applications involving street use, we recommend a more street-friendly stall speed for the converter.

Good ignition and exhaust recommended. Expect a hot-rod Idle. This cam is a good choice for truly streetable performance, as well as certain classes of gearbox-driven airboats.

## VALVES

Swirl-polished oversize Stainless valves are available in full sets of (16) for all heads, 1968 through 1979. They are ready to install with 11/32" stems, and any competent machine shop in your area can machine the oversize hardened seats unless you are repairing a damaged head, nor do we recommend reusing stock valves. With the high nickel content of the Caddy heads, and stainless valves (which are very difficult to damage), you should be able to get many, many miles of trouble free operation from your upgraded heads, even on unleaded fuels.

## OIL PANS

All oil pans are vatted, and checked for defects that would cause them to be unusable, such as excessive rust on sealing surfaces, cracks, holes, and severe warpage. These are 30-40 year old sheet metal parts, and are not perfect. Sometimes we have nice pans. Sometimes we

have fairly rough pans for a lower price (needing some elbow grease before use, but not requiring welding, etc). Sometimes we have both, and sometimes we have neither

Note: '77-up oil pans may require clearancing to clear the stroke of a 500.

# REMAN EXHAUST MANIFOLDS

All reconditioned manifolds are cleaned, magnafluxed, shot peened, magnafluxed again, checked for flat gasket surfaces and machined as needed, and have new studs installed as needed. We do not weld up cracked manifolds for sale. Reconditioned manifolds are guaranteed to not be cracked at the time of delivery. New replacement left side manifolds are available ('68-'76 style, both Eldo and RWD versions). Note that most '68-'72 Eldorados have a unique side-exit passenger's side manifold, but most '73-up Eldorados used the same passenger's side manifold (down-exit) as the other cars. Please check the original manifold style on your car before ordering. Some passenger's side manifolds have an EFE valve, and some don't.
