# VALVETRAIN

The valvetrain is an important part of any engine combination. Whether your engine is stock or full race, or anything in between, having a correctly matched, properly functioning valve train is of equal importance. If you are not sure which components are right for your engine, feel free to send us an e-mail or give us a call for a recommendation. Below you will find a variety of valves, springs, seals, and other timing components to put together a first class valvetrain.

## VT20350 SS 350 H CAMSHAFTS AND KITS - HIGH COMPRESSION (10:1 OR MORE) HOT-ROD STREET PERFORMANCE

**SKU:** VT20350

350 H series camshaft

This cam will generally put the meat of the powerband in the 2600-5800 RPM range. That means that for an exclusively drag-race-only application, you might want the converter to stall as high as 2600 RPM, and you would want to shift around 5800 RPM, if everything else is optimized for that RPM range. This cam runs great right off idle, as all real street cams should, and for applications involving street use, we recommend a more street-friendly stall speed for the converter.

Good ignition and exhaust recommended. Expect a hot-rod Idle. This cam is a good choice for truly streetable performance, as well as certain classes of gearbox-driven airboats.

## VALVES

Swirl-polished oversize Stainless valves are available in full sets of (16) for all heads, 1968 through 1979. They are ready to install with 11/32" stems, and any competent machine shop in your area can machine the oversize hardened seats unless you are repairing a damaged head, nor do we recommend reusing stock valves. With the high nickel content of the Caddy heads, and stainless valves (which are very difficult to damage), you should be able to get many, many miles of trouble free operation from your upgraded heads, even on unleaded fuels.
